

Corporate AI Intensive — a one-pager for the finance lead

Terms for internal sign-off. The final commercial terms are fixed in the contract; this is not an offer.

Document revision: 21 September 2026

Scope

A corporate AI intensive run on your company's own tasks: two groups of up to 20 employees, 4 live sessions of 2 hours for each group over 2 weeks. Every participant also gets the video course with 12 months of access.

Price and closing documents

99,999 UAH for the company — one amount covering training for BOTH groups, with no extra charge for the second. The invoice goes to the company: we are an LLC and work with VAT. The classification is educational services with a training programme; closing documents and acceptance acts are provided.

Acceptance criteria

The criteria for «it works» are put in writing before the start: the scenario, your data, who uses it. At least 3 automations for the priority tasks the company defined itself — a written commitment. A «working automation» is not a demo: it runs the agreed scenario on your data and in your tools.

Support after the rollout

For the first month after the intensive we support the automations that were built — that is in the price. A separate SLA with a guaranteed response time is NOT part of this price: if you need one, we fix the terms in the contract before the start. After that it is your team or a separate ongoing-support programme.

Group composition and the load on your team

4 sessions of 2 hours for EACH of the two groups (up to 20 people per group) plus a 30-minute kick-off. Around 8 hours per week per participant at 2 sessions a week: 4 hours of sessions and roughly as much practice in between. One contact person on your side signs off the group composition, the schedule and the materials.

Tools, integrations and data

We work with what you already have: spreadsheets, CRM, 1C, email, messengers. The exact list of tools and integrations is agreed on the diagnostic call BEFORE the start. We do not require sensitive data — for such processes we use test or anonymised data; NDA on request.

What stays with the company

The code and the automations belong to the company and run on your own tools — there is no lock-in to a contractor. You also keep the video course (12 months), the technical-brief templates and the recordings of the sessions where your tasks were worked through.

What this price does not include

Subscriptions to AI services (the company pays for those directly), work on tasks beyond the agreed priorities, support after the first month, and a formal SLA. These are separate agreements, not hidden invoice lines — the full first-year cost depends on what you choose.

Next step

A 30-minute diagnostic call: we work through one of your real tasks and agree on the list of tools and the acceptance criteria — all of it before any payment. course.aiadvisoryboard.me/en/corporate

Amounts and terms are given as of the revision date; the final ones are in the contract.
